

A proactive and analytical **Game Programmer** with a strong passion for problem-solving and cross-discipline collaboration. I approach technical challenges from multiple perspectives to deliver efficient, scalable solutions. Confident in communicating ideas and driving constructive input within team environments, I stay ahead of emerging technologies and apply industry innovations in practical, results-driven ways—combining professional rigor with the curiosity I bring to gameplay.

Work Experience

Game Programmer	GameChanger Studio Jakarta, Indonesia	Aug 2022–Aug 2026
------------------------	---	--------------------------

GameChanger Studio is an indie game studio from Indonesia. Known for My Lovely Trilogy. Focus on Narrative Simulation and Story-Driven Game with many Target Platform (Steam, Nintendo, PlayStation)

- Served as Lead Game Programmer for 1998: The Toll Keeper Story, defining core game architecture, establishing sprint and build schedules alongside production, and delegating development tasks across the engineering team.
- Led the mobile porting of 1998: The Toll Keeper Story in C# / Unity, integrating Google Play SDKs, optimizing game performance, and adapting UI layouts across diverse screen aspect ratios alongside UI/UX artists.
- Engineered a Variable & Evaluator Scriptable Objects system in C# / Unity, enabling game designers to dynamically create custom event conditions and artists to drive environment state shifts without writing code.
- Developed a scalable 2D character customization tool in C# / Unity, allowing artists and animators to self-serve character target setup and speed up asset integration.
- Managed game platform backends, engineering cloud save architecture, achievement tracking, and private branch configurations, while executing build deployment pipelines across release environments.
- Engineered and maintained a scalable, modular save system using Scriptable Object architecture, streamlining data management through real-time in-Editor inspection and direct editing of save states outside of play mode.
- Developed and maintained a unified cross-platform achievement architecture in Unity, streamlining achievement integration across all targeted platforms for flagship titles 1998: The Toll Keeper Story and My Lovely Empress.
- Developed a custom Unity Editor dependency window, allowing developers and designers to instantly locate and inspect GameObject, scene, and prefab references across the codebase.
- Engineered and maintained a custom dialogue framework using Dialogue System for Unity, building dedicated Editor tools, Excel import/export pipelines, and localization workflows—enabling narrative designers to author dialogue and test directly in-engine.
- Developed an in-Editor Google Sheets sync tool in C# / Unity for My Lovely Empress, allowing game designers to effortlessly balance and push game variables directly into engine assets.
- Architected an extended cross-platform input system in Unity for My Lovely Empress, managing layered window focus, key-remapping pipelines, and real-time controller glyph switching across target platforms.
- Contributed to My Lovely Empress across core gameplay programming, VFX implementation, 3D character asset optimization, Steam SDK integration, localization pipelines, and Nintendo Switch porting.

Game Programmer Intern	Joyseed Gametribе Jakarta, Indonesia	Jul 2021–Dec 2021
-------------------------------	--	--------------------------

Joyseed Gametribе is a mobile game development studio based in Jakarta, known for creating casual arcade and simulation games.

- Implemented core gameplay mechanics, combat content, and spell VFX setups for *Light of Eden* (Archerо-like game).
- Implemented game UI on Unity Canvas and trained UI artists on in-engine canvas setup, streamlining the art-to-engine pipeline and enabling independent asset configuration.
- Applied clean code, design patterns and Agile/Scrum in C#/Unity to build a 2D mobile endless shooter (internship project).

Game Programmer Intern	Game Level One Jakarta, Indonesia	Jun 2020–Aug 2020
-------------------------------	---	--------------------------

Game Level One (GLO) is a digital-based technology company that focuses on branding, promotion and advertising using the games method. Provide gamification solutions to clients through gamification systems, in-games advertising.

- Upgraded and migrated legacy Unity projects (Puno and Doki Doki Rescue) to stable engine LTS releases, integrating .aab build output pipelines to meet updated Google Play store requirement guidelines.
- Co-developed interactive gamification products in Construct 2, handling asset reskinning, server deployment, and QA testing.

Education and Certifications

-
- **Bachelor of Computer Science (GPA: 3.84)**, Telkom University, Indonesia.

2018–2022

Technologies and Languages

- Languages: C#, Python, C++, Java, JavaScript, SQL.
- Technologies: Unity, Git, Construct 2, MySQL, GitHub Action, Google Play SDKs, Steamworks.
- Other: Software Construction, Game Architecture, Cross-Platform Porting, OOP, In-Editor Tooling, Algorithm Design.

Projects & Achievements

- **Assistant Lecturer** of Software Construction, led lab sessions, mentored students, and authored course modules.
- **Presented** at 1st International Conference on Software Engineering and Information Technology (ICoSEIT 2022), Indonesia.
- **Finalist** of National Programming Competition | GEMASTIK XIII.
- **3rd Place Winner** in National Competitive Programming | Veteran Competitive Programming 2020.
